HTML Links - Create Bookmarks

HTML links can be used to create bookmarks, so that readers can jump to specific parts of a web page.

Create a Bookmark in HTML

Bookmarks can be useful if a web page is very long.

To create a bookmark - first create the bookmark, then add a link to it.

When the link is clicked, the page will scroll down or up to the location with the bookmark.
Example

First, use the id attribute to create a bookmark:
<h2 id="C4">Chapter 4</h2>

Then, add a link to the bookmark ("Jump to Chapter 4"), from within the same page:
Example
Jump to Chapter 4

You can also add a link to a bookmark on another page:
Jump to Chapter 4

Chapter Summary

- Use the id attribute (id="*value*") to define bookmarks in a page
- Use the href attribute (href="#*value*") to link to the bookmark

Exercise:

Use the correct HTML to make the text below into a link to "default.html".
